

## ITCSIU23025 – Lab1 Assignment

**Deployment:** [https://thminh26.github.io/WebApp\\_Lab1/](https://thminh26.github.io/WebApp_Lab1/)

### AI usage:

- In the stores page I asked copilot to use my color variables and swap around background colors and text colors to make the cards more easily readable than my own design. (Sorry I don't have picture for this one)
- In the deployment process I encountered some problems getting my page deployed so I asked copilot why and how to fix it. It told me the problem was with my file paths, so I fixed it.

### Quick Fix Solution:

#### Option 1: Update your workflow to deploy only the Lab1\_Assignment folder

Change line 42-43 in your workflow from:

YAML

```
path: '.'
```

to:

YAML

```
path: './Lab1_Assignment'
```

This way GitHub Pages serves the `Lab1_Assignment` folder as root, and you just need to change all paths from `../Lab1_Assignment/` to `./`

#### Option 2: Use search & replace

In each HTML file, do a find and replace:

- Find: `../Lab1_Assignment/`
- Replace with: `./`

Would you like me to help you create a pull request to fix all these paths automatically?
